

José Luis Martínez Cadavid

AI Full-Stack Engineer · Cybersecurity · Agentic Systems · Quant Development

Colombia +57 304 243 5599 jlmc97@gmail.com linkedin.com/in/jlccadavid github.com/jlccadavid jlccadavid.github.io

PROFESSIONAL SUMMARY

AI Full-Stack Engineer with five years of enterprise cybersecurity experience at Mercado Libre. Builds secure AI-enabled products across Python, Django/FastAPI, TypeScript, React/Next.js, Flutter, data, cloud infrastructure, and staging operations. Specializes in agentic workflows, MCP, RAG system design, IAM, application security, and quantitative research platforms. Founder of WV SOFTWARE, an independent practice delivering secure end-to-end software systems.

CORE SKILLS

Applied AI: Agentic workflows, tool calling, MCP, RAG architecture, LLM integrations, prompt/data trust boundaries, evaluations, rate and token controls, deterministic fallbacks

Full Stack: Python, Django, FastAPI, REST/OpenAPI, SQL, PostgreSQL, Redis, Celery, TypeScript, React, Next.js, Flutter, Tailwind CSS

Cloud & Delivery: GCP, Cloud Run, Terraform, Docker, GitHub Actions, CI/CD, observability, automated testing, Sentry, Linux, Git

Security: IAM, SSO/SAML, Entra ID/Azure AD, Okta, MFA, RBAC, SoD, access governance, AppSec, secure SDLC, system audits, code review

Quantitative Systems: Market-data pipelines, backtesting, strategy research, hyperparameter optimization, portfolio construction, risk controls

PROFESSIONAL EXPERIENCE

Founder & AI Full-Stack Engineer

2025–Present

WV SOFTWARE · Independent Practice · Colombia

- Lead discovery, architecture, implementation, review, staging delivery, and technical documentation for secure AI and full-stack products across agritech, enterprise operations, ecommerce, price intelligence, and quantitative finance.
- Designed a spec-driven, agent-assisted engineering harness in which specialized agents plan, implement, review, and prepare deployments under human approval gates, dependency-aware concurrency, and resource controls.
- Build LLM capabilities using MCP, tool calling, RAG system design, account-scoped context, validation, rate/token limits, observability, and safe deterministic degradation paths.
- Delivered the first independent client platform to staging: an anonymized insurance-operations system replacing spreadsheet workflows with hybrid identity, MFA, scoped RBAC, reviewed imports, dashboards, and audit trails for 1,000+ agents and approximately 9,700 contracts.
- Develop TBOT as an AI-enabled quantitative research platform with data pipelines, backtesting, optimization, portfolio/risk controls, MCP diagnostics, and bounded AI research tools separated from live-money authority.

Cybersecurity SSr Engineer

2021–2025

Mercado Libre · Colombia

- Maintained, improved, and audited security-critical systems supporting enterprise identity and access management.
- Built and maintained a central ticketing and workflow platform through which company-wide IAM processes were sanitized, validated, approved, and executed.
- Resolved identity and access issues across the organization and improved the reliability and control of operational security workflows.
- Developed numerous SSO integrations between external organizations and Mercado Libre using Python, web technologies, identity protocols, and SQL-backed systems.
- Worked with access governance, certification workflows, segregation-of-duties controls, Entra ID/Azure AD, Okta, SSO/SAML, MFA, and cloud services.
- Served as a team code reviewer and member of a code-approval council, assessing changes and production readiness with IAM and application-security judgment.

- Supported the Information Security function during a professional internship in a regulated enterprise environment.

SELECTED ENGINEERING PROJECTS

Savia — Secure AI + IoT Agritech Platform Development / Staging

Django/Flutter/GCP platform connecting LoRa field telemetry to alerts, dashboards, LLM insights, and persistent chat. Implements tenant-scoped access, prompt/data trust separation, throttling, token/time ceilings, secret isolation, provider fallbacks, and infrastructure as code.

TBOT Platform — AI-Enabled Quant Research Development / Staging

Python/TypeScript platform for market data, backtesting, systematic strategy research, optimization, portfolio and risk controls. Includes an owner-scoped AI assistant, MCP diagnostics, and a bounded simulation-only tool-calling research mode.

PriceScout — Cross-Border Price Intelligence Development

Chrome MV3 extension and Python backend comparing retailers in the US and Colombia. Uses LLM-assisted query translation with cache, retry/backoff, reasoning-leak rejection, output validation, and deterministic fallback.
Current independent products are in development or staging. Private repositories and client-sensitive implementation details are available only in recruiter-safe case-study form.

EDUCATION

B.Sc. in Systems and Computer Engineering

Universidad del Norte · Colombia · 2015–2021

Recognition: Orgullo Caribe Scholarship, Universidad del Norte (2015)

LANGUAGES

Spanish — Native

English — C1, Cambridge FCE

German — A2
